

## SEAL

MULTIPURPOSE PRODUCT SUITABLE FOR ALL  
CHLORINATED CLEANERS

### PACKAGING :

- 200L barrel
- 20L cans

## AREAS OF APPLICATION

During stripping, the strippers tend to evaporate, in this case to avoid reducing the efficiency of the strippers and a loss of the product due to evaporation, the SCALP SEAL must be added to the bath.

Because of the density of the SCALP SEAL, it rises to the surface and thus the vapors have trouble getting out of the bath.

It should be noted that SCALP SEAL does not have any activator or penetrating action for the stripper but acts as an anti-evaporant.

The percentage of addition must not exceed 10% of the total quantity of strippers.

The best results are obtained with a readjustment in SCALP SEAL at 5%.

## APPLICATION

SEAL is a highly refined oil of petroleum origin which slows the evaporation phenomenon of chlorinated strippers during bath stripping operations

**DILUTION:** Ready to use product

**PROCEDURE:** Pay 2 to 5% of Stripac Base ECO

**APPLICATION TEMPERATURE:** Ambient

**YIELD:** 2 to 5% / total bath volume.

**STORAGE :**

- Min storage temperature: +10 ° C
- Max storage temperature: + 25 ° C

SCALP is a French family-owned business and manufacturer of cleaning, protection and treatment solutions, with over 65 years as a construction-industry specialist.

Store in tightly closed containers, protected from the weather and direct sunlight. If the product is not used within 12 months from the date of manufacture but storage conditions have been met then additional time may be allocated. In this case, contact our sales department.

### PHYSICOCHEMICAL PROPERTIES
